Yeshwantrao Chavan College of Engineering

(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)

Hingna Road, Wanadongri, Nagpur - 441 110

NAAC A++

Ph.: 07104-237919, 234623, 329249, 329250 Fax: 07104-232376, Website: www.ycce.edu

Department of Computer Technology

Vision of the Department

To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.

Mission of the Department

To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.

Session 2025-2026

Vision: Dream of where you want.	Mission: Means to achieve Vision
---	---

Program Educational Objectives of the program (PEO): (broad statements that describe the professional and career accomplishments)

PEO1	Preparation	P: Preparation	Pep-CL abbreviation pronounce as Pep-si-IL easy to recall
PEO2	Core Competence	E: Environment (Learning Environment)	
PEO3	Breadth	P: Professionalism	
PEO4	Professionalism	C: Core Competence	
	Learning	L: Breadth (Learning in diverse areas)	
PEO5	Environment		

Program Outcomes (PO): (statements that describe what a student should be able to do and know by the end of a program)

Keywords of POs:

Engineering knowledge, Problem analysis, Design/development of solutions, Conduct Investigations of Complex Problems, Engineering Tool Usage, The Engineer and The World, Ethics, Individual and Collaborative Team work, Communication, Project Management and Finance, Life-Long Learning

PSO Keywords: Cutting edge technologies, Research

“I am an engineer, and I know how to apply engineering knowledge to investigate, analyse and design solutions to complex problems using tools for entire world following all ethics in a collaborative way with proper management skills throughout my life.” to contribute to the development of cutting-edge technologies and Research.

Integrity: I will adhere to the Laboratory Code of Conduct and ethics in its entirety.

To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.

Session	2025-26 (ODD)	Course Name	Computer vision Lab
Semester	5	Course Code	23CT1522
Roll No	44	Name of Student	Devid Deshmukh

Practical Number	5
Course Outcome	Upon successful completion of the course the students will be able to: 1. Apply image enhancement and smoothing techniques to improve image quality for further analysis. 2. Extract meaningful features from images using descriptors such as HOG and SIFT. 3. Implement and evaluate modern object detection methods including YOLO and R-CNN. 4. Analyze and develop solutions for motion estimation, object recognition, and facial expression recognition
Aim	using classical and learning-based methods. Implement an object detection system using the YOLO (You Only Look Once) algorithm that can accurately identify and locate multiple objects in images or video streams in real time.
Problem Definition	Write a Program To Apply YOLO On Input Image.
Theory (100 words)	YOLO, which stands for <i>You Only Look Once</i> , is a popular object detection method used in computer vision. Unlike older methods that check many parts of an image separately, YOLO looks at the whole image in a single pass using a Convolutional Neural Network (CNN). The image is divided into a grid, and each cell predicts bounding boxes, confidence scores, and class probabilities for objects whose center is inside the cell. After prediction, Non-Max Suppression removes overlapping boxes, keeping only the best ones.

Procedure
and
Execution
(100 Words)

Algorithm:

- **Look at the whole image at once:**
YOLO does not scan an image piece by piece. Instead, it processes the entire image in a single pass.
- **Divide the image into a grid:**
The image is split into small cells. Each cell is responsible for detecting objects whose centers lie inside it.
- **Each cell predicts:**
 - **Bounding boxes** : The location and size of objects.
 - **Confidence score** : How likely the box contains an object.
 - **Class probabilities** : What type of object it is (person, car, dog, etc.).
- **Combine predictions:**
- All predictions from all grid cells are collected at once.
- Remove overlaps:**
Using **Non-Max Suppression** , overlapping boxes are removed, keeping only the most confident ones.
- **Final output:**
You get bounding boxes with labels and confidence scores for every object in the image — fast and accurate

Code:

```
import cv2
import matplotlib.pyplot as plt
import torch
from ultralytics import YOLO
from google.colab import files

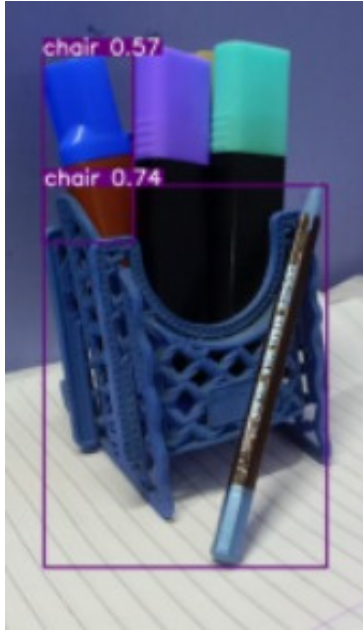

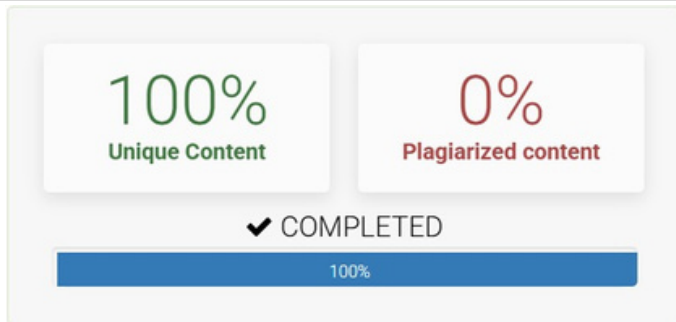

model = YOLO("yolov8n.pt")

uploaded = files.upload()
image_path = list(uploaded.keys())[0]

results = model(image_path)

plt.imshow(results[0].plot())
plt.axis('off')
plt.show()
```

Output:

	
Output Analysis	<p>When YOLO runs on an image, it detects all objects in a single pass and outputs bounding boxes, class labels, and confidence scores for each detected object. The bounding boxes show the location and size of objects, the class labels identify what each object is, and confidence scores indicate how sure the model is about each detection.</p>
Link of student Github profile where lab assignment has been uploaded	<p>https://github.com/devid-deshmukh/CV_Practicals_CT_44</p>
Conclusion	<p>YOLO is a fast and accurate way to find objects in an image because it looks at the whole picture at once instead of scanning parts separately. In MATLAB, this process is made easy with built-in functions and pretrained models. After installing the required support package, you can detect objects in just a few lines of code. This saves time and makes object detection simple for students and researchers.</p>
